MPEG-4 HD SIGNALS AVAILABLE FROM SHAW BROADCAST SERVICES

With the recent completion of Phase 1 in the transition to MPEG-4, we have compiled a list of the MPEG-4 HD signals currently available from Shaw Broadcast Services. If you are not already accessing these signals, we recommend that you obtain them prior to the SD version of the signal being removed from our satellites (most of the SD signals will drop during Phase 3 in 2019). Signals with an asterisk will move again during the transition.

Additional HD signals will launch during Phase 2 and 3 of the transition. Our objective by the end of Phase 3 is to have a primarily all HD MPEG-4 offering. Signals that are not available in HD will remain in SD and transition to MPEG-4.
